Open Data In a nutshell

How Big Data and Open Data relates to other types of data

Government Data

Citizen-Generated Data

Environment

- Air quality
- Water quality
- Water consumption

- Instant gas consumption/ carbon emission
- Instant water consumption

Energy

- Instant power supply
- Instant power demand
- Energy consumption

- Instant home power demand
- Active devices per type

Traffic

- · Traffic light map
- Number of vehicles per zone
- Parking lot status
- Traffic cameras

- Consumer GPS location
- Traffic-related feeds & microblogs
- Geolocated pictures & videos

Crowdsourced Traffic Management

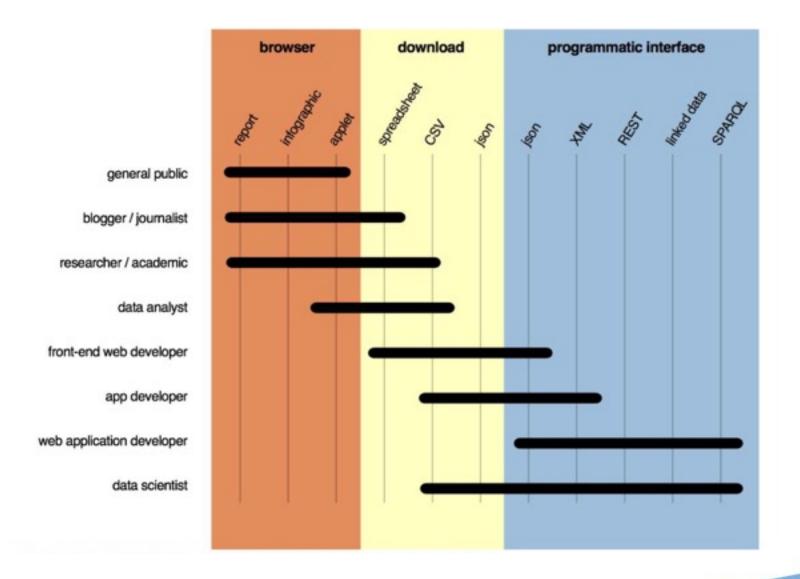

Consumer-Device to Government-Infrastructure

Collaborative Environmental Management

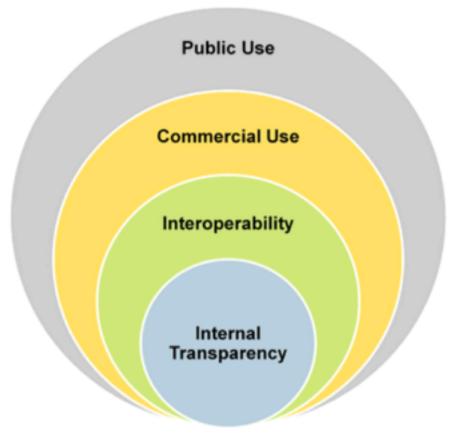

Open Data In Enterprises

Figure 5. The Progression of Opening Data

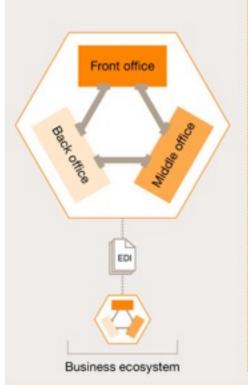

Source: Gartner (January 2014)

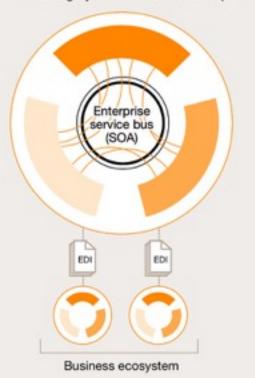

A1

Historically, the front, middle, and back offices of an enterprise were integrated point to point by tight coupling, suitable only for a small number of integrations.

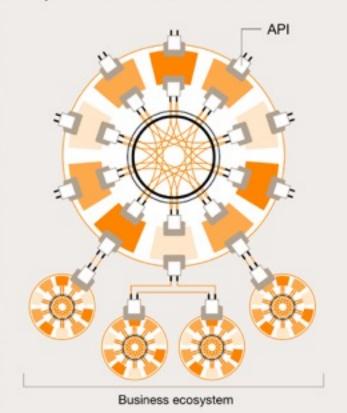

A2

With SOA, enterprises adopted an architecture using a service bus for integration, creating loose coupling and the potential for reuse and flexibility. The complexity of integration meant use remained largely internal to the enterprise.

A3

The new architectural principle and programming model based on RESTful APIs reduces integration cost and complexity, so integrations can scale for many internal as well as external uses.

Open Data In Governments

- In 2009, he White House issued an unprecedented <u>Open Government</u> <u>Directive</u> requiring federal agencies to take immediate, specific steps to achieve key milestones in transparency, participation, and collaboration. The Directive https://www.whitehouse.gov/open/documents/open-government-directive
- In 2011, the Administration expanded its support of open government efforts when President Obama launched the <u>Open</u> <u>Government Partnership</u> at the UN General Assembly meeting with seven other heads of state.
- In 2013, President Obama signed an <u>executive order</u> that made open and machine-readable data the new default for government information.

OPEN GOVERNMENT NATIONAL ACTION PLANS

First White House Data Chief Discusses His Top Priorities

DJ Patil talks about how to get more our of public and private information while protecting that data from abuse

March 27, 2015 | By Larry Greenemeier

Data science is not entirely new to
Washington, D.C.—nor is DJ Patil, who was
recently named as the U.S.'s first chief data
scientist. Pres. Barack Obama's
administration launched Data.gov nearly six
years ago and required all agencies to
publish at least three "high-value" data sets
to the publicly accessible Web site. Now it is
Patil's job, at least in part, to ensure that the
government continues to release data in a
variety of areas while ensuring that the
information is not misused.

"At the top of my list right now is the Precision Medicine Initiative. Science has enabled us to unlock the human.genome"

"My second priority is opening up more data and making it available for people [both the government and general public] to build an ecosystem of research, mobile apps and visualizations on top of that information"

"The third main priority is inserting more data capacity into agencies throughout the government. We're seeing a rise of data scientists and chief data officers at the <u>National Institutes of Health</u> as well as within [the Department of] <u>Health and Human Services.</u>"

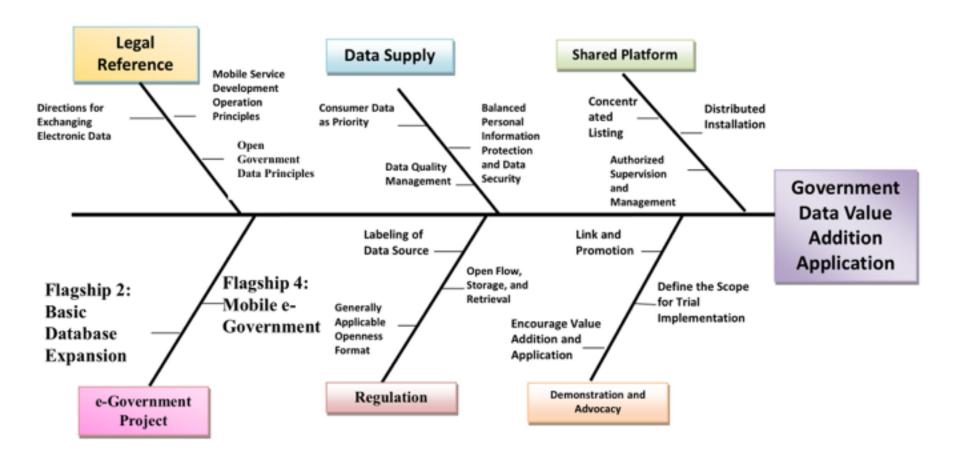

- In 2009, The Cabinet Office Director of Digital Engagement issued a call for developers to help test the new developers beta. The launch includes a number of datasets in RDF.
- In 2010, Prime Minister David
 Cameron sends a letter to government
 departments asking for specific action
 on opening up government data and
 establishes a new 'Transparency
 Board' to include Tim Berners-Lee,
 Nigel Shadbolt, Tom Steinberg
 (Founder ofMySociety) & Rufus
 Pollock.
- In 2011, UK joined Open Government Partnership as the member.

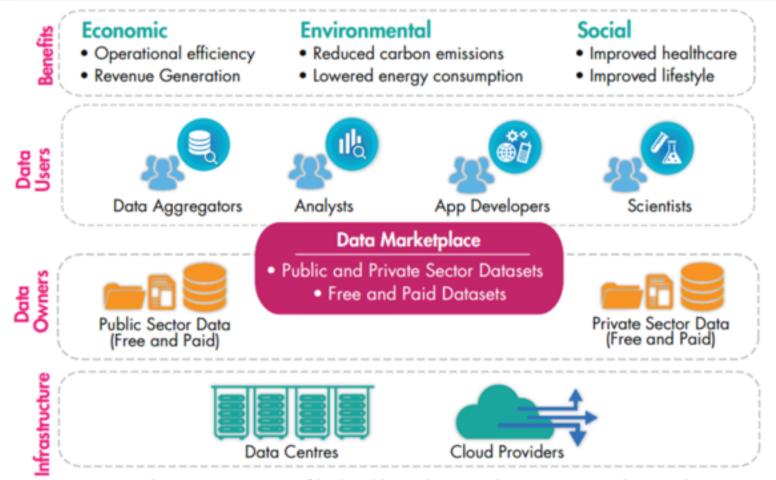

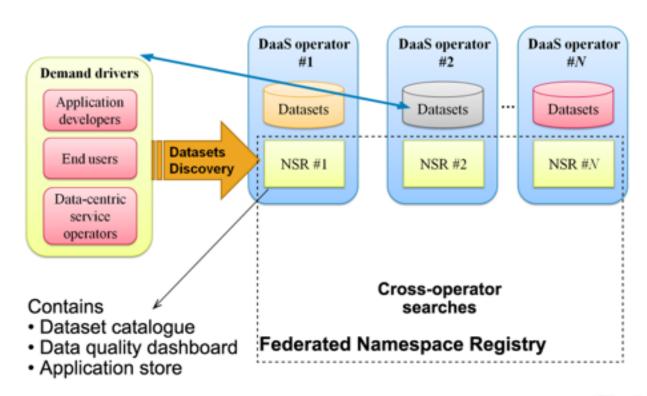

Engendering an ecosystem of both public and private data sector to incubate and nurture new business and creative opportunities

Data-as-a-Service

Dataset access APIs

ESTABLISHING THE ONLY TEST DATA BANK IN KOREA

Continue to collect useful public and private data and use them for facilitating industry and fostering manpower

Inter-ministerial collaboration

Open public data (Open API)

Connection to pilot projects

Web crawling

Purchase of global research data

:

Pilot Project Data

- · Healthcare, medicine
- · Commercial areas, real-estate
- Real-time weather data
- Transport, Communications, SNS

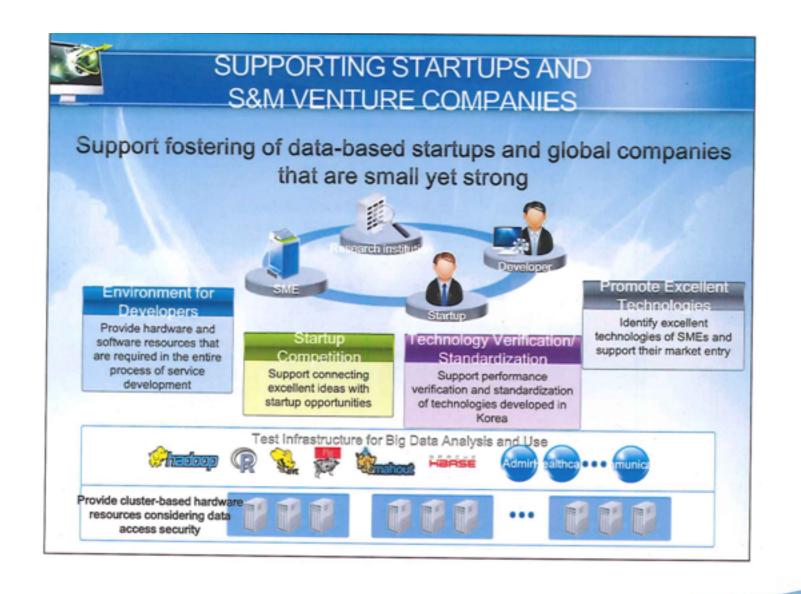

- · Crime analysis database
- · Status of maritime distress
- · Remote emergency medical service

- Research network traffic log
- Internet traffic data
- Korean map data
- Census data, etc.

หาตำบลจาก lat long

วันก่อนเห็นมีคนเอาข้อมูลจาก opendata จาก http://data.go.th/ มาใช้งานวันนี้แผลอะเชียน api สำหรับบอกข้อมูลว่า ณ. location ที่เราอยู่เราอยู่ใกล้คำบลอะไร จังหวัดอะไร ล่งข้อมูลเป็น lat long ที่เป็น เลขฐาน 10

ใปของทุกของใช้กับใต้ครับที่ http://api.conf.in.th:8081/distance?lat1=100.16ion1=30.2

```
← → C* api.conf.in.th:8081/distance?lat1=100.1&lon1=30.2

{

Ta_ID: $70901,

Tambon_T: "m. usists",

Tambon_E: "Mac Sai",

AM_ID: $709,

Amphoc_T: "s. usists",

Amphoc_E: "Mac Sai",

CR_I:: 5",

Chas per b, F. '%. | $9 // 68 |,

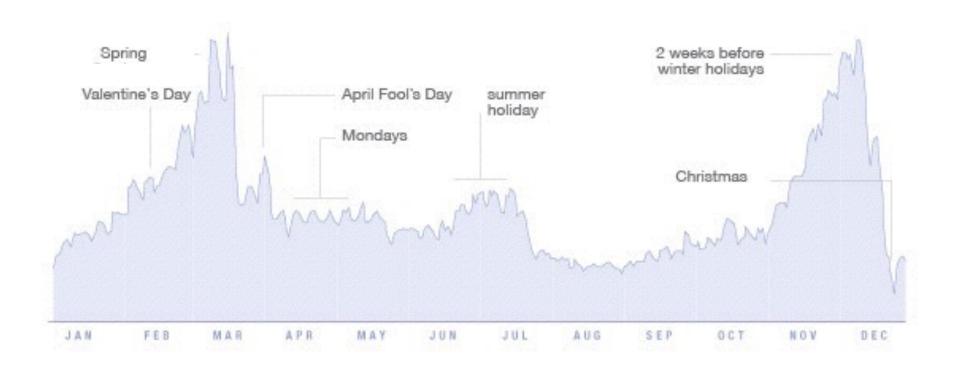

Chasquat_E: "Chiang Rai",

Lat: $9.913,

Lon: 20.425
```

What is this data representing?

"Data is more interesting than information"
